

Banking surveillance solutions

Highly secure, centrally managed,
multi-site or single-site setups

Milestone XProtect® VMS suite | Milestone distributed architecture | Milestone partner solutions

- › Intelligent archiving
- › Access control
- › Dwell time detection
- › Secure video handling
- › Audio alarm recording
- › Facial recognition
- › System redundancy
- › Intelligent sound analytics

Optimize system scalability

A range of Milestone products and services including the Milestone Husky™ NVR series, Milestone Interconnect™ and/or Milestone Federated Architecture™ make it possible to customize your solution across geographically dispersed sites with ease.

Secure your recordings

Failover recording servers maintain video viewing and recording capabilities with minimal interruption and video loss in the event of network problems, server failure, loss of power or any other system problem.

Unify business and security

XProtect software doesn't just provide a secure environment for customers and staff - it also gives owners the opportunity to integrate business systems to achieve greater efficiencies in operating processes.

Cost-effectively transition from Analog to IP

An IP-based system capable of providing enhanced surveillance is made easy with Milestone Encoder licensing - offering a no-hassle, cost-effective entry point for analog users to unlock a wide array of surveillance and security capabilities.

Better than ever security

Customize your single or multi-site solution

Milestone XProtect VMS suite for banking installations

The Milestone XProtect VMS suite of products delivers powerful IP video management software (VMS) designed for high-security environments, providing supreme situational awareness and precise response to incidents. XProtect® Corporate features interactive maps linked to alarms and includes the video wall product XProtect® Smart Wall. Edge Storage support combined with failover recording and redundant management servers ensures that video recordings are never interrupted.

Milestone distributed architecture

Milestone Husky NVRs, Milestone Interconnect and/or Milestone Federated Architecture allows system architects and integrators to design, implement and grow a large-scale

surveillance system in manageable parts with multiple sites and tens of thousands of devices and users. It also provides the flexibility to create, add and delete sites depending on factors such as organizational structure, network infrastructure, system use, security needs and legal requirements.

Milestone partner solutions complete your setup

Third-party integrations provided by our solution partners; such as people counting, point-of-sale (POS)/automated teller machine (ATM) solutions, video analytics software, heat mapping, facial coverage, age/gender recognition, dwell time detection and access control can be integrated into your security and surveillance mix.

Customer story

Scalability for future growth

Rosenthal and Rosenthal, the largest privately owned financial factoring company in the United States, is located at the busy Herald Square in the heart of Manhattan. Their previous analog surveillance system was low quality and antiquated. Today's Milestone video surveillance solution enables security guards, receptionists and IT administrators to have customized access to the system. Area	Concern	Solution
Intelligent archiving	Inadequate storage capability limits bank security efforts	Automated data migration to a more cost-effective storage disk location, set to a timeframe of your choice
Access control	High-security areas accessed by persons without appropriate clearance	XProtect® Access Control Module unites access control and video into one security solution. It enables easy integration of third-party solutions into the user interface XProtect® Smart Client
System redundancy	Server breakdown or interrupted	Failover recording servers can be utilized to prevent system breakdown and potential loss of vital recordings. Edge Storage is an additional redundancy option that ensures the continuous recording of video
Secure video handling	Issues meeting legal requirements in the evidence handling process	Features such as HTTPS connection from camera to servers, digital signing of recordings and Evidence Lock help increase overall video security
Dwell time detection	Inefficient tracking of unattended or mysterious items	Optimal analytics behavior from Milestone Solution Partners detects changes in the camera view and generates an alarm in XProtect Smart Client
Audio alarm recording	Unable to connect suspicious dialog with potential criminal activity	Audio recording on alarms with two-way audio helps determine conversations held during events such as robbery attempts
Intelligent sound analytics	Unable to gain any preemptive intelligence due to no early warning alarm systems	Intelligent sound analytics makes it possible to distinctively identify unique sounds including aggressive voice tones, panic or screams, breaking glass, aerosol spray paint, gunshots and explosions
Facial recognition	Difficulty positively identifying criminal suspects due to poor video quality	XProtect Corporate VMS integrates with the widest range of high-resolution cameras to provide the best resolution possible for third-party facial recognition software

Milestone Systems is the global leader in open platform IP video management software. Milestone software is sold through authorized and certified partners worldwide.
